DETAILED ACTION

Examiner agrees with applicant in some issues and disagrees in other issues. Please see the new restriction requirement below.

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Claims 6, 7, 33 and 34 (dependent on claim 34) are generic claims.

Group I, claim(s) 1-5, 8-12, are drawn to flyback single-ended digitally controlled synchronous rectifier classified in class 363, subclass 21.14.

Group II, claim(s) 13-16, 23 and 24, are drawn to a secondary side self-oscillating synchronous rectifier classified in class 323 subclass 19.

Group III, claim(s) 17-22, 25-32, 35-38 are drawn to a differentiating circuit for a controlled switch classified in class 363 subclass 97.

Although claims 17-22 are dependent on claim 13, they do not require the limitations of claim 13 they can be just as easily be dependent on the generic claim 6. Evidence of differing invention is evidence by applicant's independent claim 36 and 38.

2. Inventions I and II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I is used to the control the primary side of a DC/DC converter

Art Unit: 2838

and subcombination II is used to control the secondary side of the DC/DC converter and subcombination III has separate utility such as specific control circuitry (differentiating circuit) that processes information from the secondary side control the primary side . See MPEP § 806.05(d).

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bao Q. Vu whose telephone number is (571) 272-2088. The examiner can normally be reached on Monday-Thursdays, 8:00AM- 6:00PM.
